

## SD824-5

Figure 1 is an electrical connection diagram for the rear window system. It illustrates the wiring between the rear window control unit (安全门窗ECU) and various components. The control unit has terminals for power (B+), ground (搭铁), and control signals (上升, 下降, 自动, 脉冲). The rear window motor (后右电动门窗) is connected to the control unit via a 1.25V/B and 1.25R signal line. The rear window lock (至门窗锁) is connected via a 0.3P/B and 0.3W/O signal line. The rear window lighting (参考照明灯) is connected via a 0.3V signal line. The diagram also shows the connection to the rear window switch (后右电动门窗开关) and the rear window lock switch (至门窗锁开关).
